

WORKLOAD MIGRATION TO AZURE

Extended Security in the Cloud

Azure migration helps organizations keep their assets secure, optimize costs, and achieve resilience. Azure managed services can help reduce operational overheads and free up time for development and operations teams.

A UNIFIED APPROACH TO CLOUD MANAGEMENT

AMTRA is a Microsoft Certified Partner. We create transparent and custom-made Azure Cloud Migration processes for our clients. Our team of experts makes a thorough assessment of the current assets in your environment to prepare a report. The report helps us recommend the various software and hardware changes your organisation needs for a successful transit.

We migrate the existing on-premises application, infrastructure, and data to Azure cloud only when our team are absolutely sure that there no tool or technology missing. This ensures that the migration is smooth and glitch free.

OPTIMIZE PERFORMANCE

Our Microsoft Azure certified specialists are always monitoring your applications in order to find ways to optimize their performance. They use their expertise to custom-design the Azure platform to suit the needs of your enterprise.

We also offer cloud recovery services to all our clients and make sure that if a natural disaster occurs the back-up works remains intact.

HIGHLIGHTS

Assess each workloads' technical fit. Validate the technical readiness and suitability for migration.

Migrate your services. Perform the actual migration by replicating on-premises resources to Azure.

Manage costs and billing. . Understand the tools required to control costs in Azure.

Optimize and promote. Optimize for cost and performance balance before you promote your workload to production.
